Displaying non-R code

It's possible to insert HTML, LaTeX and Markdown code without it being interpeted in your document by
setting code chunk language:

```html
<div class="row">
  <div class="col-md-6">
    Hello!
  </div>
  <div class="col-md-6">
    World!
  </div>
</div>
```

```latex
\usepackage{foo}
% latex
```

```markdown
# Header
## Sub heading
*bold*
```
