Untitled

Raw LaTeX

LaTeXcan be inserted into RMarkdown documents without issue

$$f(k) = \binom{n}{k} p^k (1-p)^{n-k} \tag{1}$$

Escaping LaTeX symbols

Most LaTeXspecial characters do not need to be escaped in prose, the only ones that do are:

- \# (written as \\\#)
- \ (written as \\\\)

So, the following can be used verbatim: \$, %, &, ~, _, ^, {, }.

However, they must be double escaped within code chunks. For instance, in the caption for Fig.@ref(fig:mean-gdp-chart) the \$ symbol is written as \\\\\$

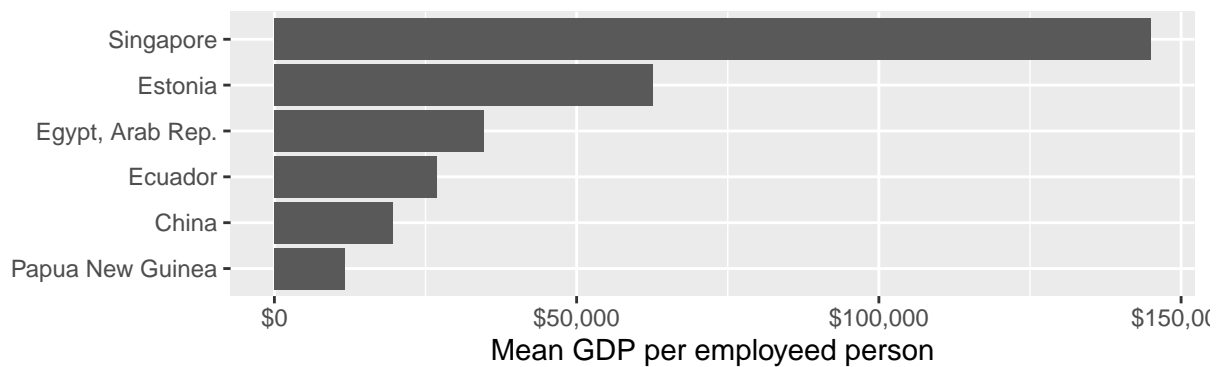

Figure 1: Mean GDP per employeed person (2010-2015, 2011 \$)
